

Performance analysis report tax year 2018/2019

Overview: Over the course of the last 12 months (April 2018-April 2019), performance and audience numbers have improved substantially with peaks in June/July 2018 due to several conference participations, including P*Si*#24 in South Korea and an invited keynote at the “Difficult research symposium” at Warwick University, United Kingdom. The total audience numbers reached, is estimated at 355 contacts over the course of 13 public appearances in total. This results in an average of 27.3 audience members reached per month. The performance activity has been intense overall within the tax year 2018/19 and prospects for 2019/2020 are equally promising but not confirmed yet. The continuing uncertainty caused by the ongoing Brexit negotiations (incomplete by April 2019) does not allow great investments into future performances yet.
